

THE CHALLENGE

Demonstrating conformance with safeguard requirements constitutes the central challenge for both developing country governments and finance providers to be able to mobilize finance at scale.

Public and private financing is increasingly looking to fund actions that not only factor in the integrity of GHG emissions reductions, but also their social and environmental performance.

Evidence shows Jurisdictions are facing significant challenges to demonstrate they effectively address, respect, monitor and report on- REDD+ safeguards.

THE SOLUTION

REDD+ Safeguards Delivery Facility (REDD SDF) was established to mobilize the investment at scale that is needed to end tropical forest loss. Building on our unique expertise on REDD+ safeguards and vetted global network of 27+ safeguards experts, the SDF will manage the deployment of technical assistance (TA) ensuring efficient and effective delivery.

The TA builds upon current safeguard efforts and in line with CLP's ethos of strengthening capacities.

The SDF also serves as a Knowledge Hub and South-South Exchange Platform that facilitates broader knowledge sharing and peer-to-peer learning.

Assessment

Assessments of capacity and technical assistance needs in relation to REDD+ safeguard requirements

Technical Assistance

Tailored capacity building and technical assistance in meeting safeguard requirements, including set-up of benefit sharing systems and grievance redress mechanisms

Monitoring & Reporting

Tailored assistance for monitoring and reporting conformance with safeguard related requirements and accessing results-based finance

WHY CLP?

We are an international advisory organization that specializes on environmental, social, and governance (ESG) safeguards, with a niche expertise on REDD+ safeguards.

Unparalleled Experience

Established in 2013, we've supported:

- 25 national governments in addressing safeguard related challenges, including setting-up safeguard technological reporting systems to the world's largest climate funds (GCF and GEF) addressing safeguard related challenges, including setting-up tech-based safeguard reporting systems
- a leading market-based standard, ART TREES, by developing their approach to ESG assessment, validation and verification

- private sector actors access climate finance through the GCF as a key service provider to their project preparation facility, specialising on ESG safeguard compliance

Diverse View and Network

Women-owned and run, we are supported by a roster of 27 of the world's leading ESG experts on all continents
